

# Kafein Security Products

AI-Powered Security Across Data, APIs & Mobile Applications

## Datanera

Data Security

Protect sensitive data across databases, files, and enterprise systems through continuous discovery, monitoring, and access control.

### Why Datanera?

- Discover and classify sensitive data automatically
- Monitor data access and user activities in real time
- Protect critical information with masking and access controls
- Reduce compliance and insider threat risks
- Gain AI-powered visibility into data security posture

### Outcome

Gain full visibility into sensitive data, detect risk activities, and enforce data protection policies across the organization.

## Apifort

API & AI Security

Discover, test, monitor, and protect APIs and AI-powered services throughout their lifecycle while preventing attacks and abuse in real-time.

### Why Apifort?

- Discover and inventory APIs automatically
- Identify vulnerabilities before they become exploitable
- Detect and block API attacks in real time
- Protect AI services against prompt-based threats
- Secure the entire API lifecycle from development to production

### Outcome

Reduce API risk, secure AI interactions, and protect critical services from evolving threats.

## Mwguard

Mobile App Security

Protect mobile applications against reverse engineering, tampering, runtime attacks, compromised devices, and unauthorized access.

### Why Mwguard?

- Prevent reverse engineering and application tampering
- Detect rooted and jailbroken devices instantly
- Protect applications against runtime attacks
- Strengthen user and device trust with attestation technologies
- Secure mobile apps without impacting user experience

### Outcome

Ensure application integrity, protect user credentials, and defend mobile apps against runtime threats.
