ApiFort

ApiFort Safeguarding Connections, Securing Futures:

ApiFort is Your API Security Solution

WHAT IS **APIFORT?**

APIFORT is an advanced cybersecurity solution designed to safeguard APIs against a wide range of security threats & vulnerabilities. APIFORT protects modern web applications, microservices, and APIs in cloud, on-premises, and hybrid environments.

CHALLENGES IN THE INDUSTRY

- Protection of Sensitive Data
- Prevention of Unauthorized Access
- Mitigation of Injection Attacks
- Defense Against Denial-of-Service (DoS) Attacks
- Compliance with Regulations
- Protection of Partner and Third-Party Integrations
- Preservation of Brand Reputation

APIFORT SOLUTION

- Data Encryption and Access Controls
- Multi-Factor Authentication (MFA)
- Input Validation and Sanitization
- Traffic Management and Rate Limiting
- Regular Audits and Compliance Checks
- Secure Integration Protocols
- Incident Response & Reputation Management

KEY FEATURES OF **APIFORT**

- ☑ API Attack Detection
- ☑ API Discovery
- ☑ Detect Changes in APIs
- ☑ Vulnerability Detection
- ☑ Up-to-date API Inventory
- ☑ API OWASP Top 10
- ☑ Sensitive Data Detection
- ☑ Enhanced Integrations

WHAT IS INSIDE **APIFORT?**

DISCOVERY

Discover APIs and Endpoints with all the details.

Enhanced API Inventory: Regenerate API Specifications from Application Traffic.

API Traffic: Capture the traffic of APIS with multiple integrations such as F5, NGINX, GoReplay, Kong

Empower Security Strategy with Comprehensive API Risk Score: Evaluate Usage, Data Types, and Internal/External Access

API Data Classification:

- Detect and Identify Sensitive Data as Personal, Financial, and Credentials
- Internal/External Classification

Informed with API Drift Tracking: Receive Alerts for New APIs or applications, and view changes

DETECTION

- List and filter all the Events with their details as Method, Hits, Risk score, Severity etc.
- View API Traffic, Attack Types and Vulnerabilities
- Manage Applications & Collections
- Manage Sensitive Data Definitions
- Manage Parameters & Rules
- Add Swagger URL or Collection File

INTELLIGENCE INSIGHTS

- Secures APIs using artificial intelligence
- Aims to ensure security by learning the usage behavior of APIs instead of adding traditional rules
- Detects uses that are outside general patterns and behaviors that could be malicious
